

Red Board Systems

Bringing Modern Technology to Legacy Systems

Access your Red Board System from the Internet!

Local Tablet View

Internet View

Remotely monitor and control¹ your Red Board System

Internet Ready

- The Red Board System is Internet enabled right out of the box when purchased with the Red Board Systems USB to Ethernet Adapter.^{2,3}

Remote Monitoring

- What you see on the Red Board System Dashboard is the same as what you see on the Internet.
- Internet information is updated in real-time on the remote /mobile device.
- Multiple users can view the same information at the same time (e.g., Farmer and Dealer).
- Text messaging capability for Major and Minor Alarms.

Remote Control

- Remote devices can perform multiple actions and change multiple parameters from the Internet, including Stopping the Dryer, Cooldown, Manual vs Automatic modes, Plenum Temperature, Unload Rate, and Target Moisture %.

Compatible Devices

- Compatible with devices with Chrome-based browsers (e.g., most Laptops, Personal Computers, along with most Android and Apple devices⁴).

¹Control options limited to a subset of functions of the Red Board System.²Internet capability requires a stable wired Ethernet connection with a recommended upload speed of 15-20 Mbps.³Although most common network topologies are supported, the Red Board System may not be compatible with all networks.⁴Chrome-based browser required. Although many Apple devices have successfully connected to the Red Board System, some Apple devices may not be supported.
